

Rate LGA's effectiveness on ENVIRONMENT / WATERSHED PROTECTION - (e.g., monitor water quality, lake levels, insect control, use of chemicals, protect lake's shoreline, fish and wildlife)

County	Full / Part Time	Ranking	Comments Environment / Watershed Protection
Warren NC	Full Time	Poor	Everything the organization does in this regard is worthless if Uranium ends up in our water.
Mecklenburg VA	Part Time	Fair	I do NOT want the uranium mining upstream!
Warren NC & Northampton NC	Part Time	Fair	I think there are real inequities when it comes to chemical treatment
Halifax NC	Part Time	Excellent	Keep up the good work.
Northampton NC	Full Time	Excellent	Monitoring weeds and lake clean-up days are extremely useful.
Northampton NC	Part Time	Good	none
Warren NC	Full Time	Good	Still havent done anything about shooting grass carp not legal. How about more grass carp. Accountability is lacking on weed control (both bidding and results).
Warren NC	Part Time	Good	This is VERY important to me... especially treatment of hydrilla
Warren NC	Part Time	Fair	Too much emphasis is put on incoming fishing, thereby too little emphasis is put on the hydrilla problem. Hydrilla treatment is POOR, resulting in large amounts of lake revenue going to companies who leave the lake virtually as they found it - "FULL of HYDRILLA"!
Northampton NC	Part Time	Good	Weed protection is still the responsibility of individual property owner, when neighbors do not participate, it lessens the effectiveness for all.
Northampton NC	Full Time	Good	You are doing a great job but the carp need to be put into the lake at more than the two places currently being used. Id like to see more natural solutions than chemical to control the hydrilla.
